Education

Gokaraju Rangaraju Institute of Engineering and Technology **Hyderabad, India**
Bachelor of Technology in Computer Science and Engineering
– CGPA: 8.79

Technical Skills

Languages: Java, Python, Go, JavaScript, TypeScript, SQL, HTML, CSS

Backend: Node.js, Express.js, Echo (Go), REST APIs, Microservices, JWT Authentication, Redis

Frontend & Mobile: React.js, React Native (Expo), Flutter

Databases: PostgreSQL, MongoDB, Redis (caching)

AI / Agents: AWS Strands SDK, AWS Bedrock (via Strands), tool-using agents, multi-agent orchestration

Cloud & DevOps: AWS (Bedrock; S3 familiar), Azure Blob Storage, Docker, Render, Cloudinary, GitHub Actions (CI/CD), Git, Linux, Postman

CS Fundamentals: Data Structures & Algorithms (400+ LeetCode problems in Java), DBMS, Operating Systems, OOP, Computer Networks

Projects

Agents and Architectures **GitHub**
Python, AWS Strands SDK, AWS Bedrock

- Implemented four agent architectures with the AWS Strands SDK — a **Swarm** of collaborating specialists sharing memory, **graph-based DAG workflows** with conditional routing, and **sequential chains** producing structured decision memos — with integrated tool use and persistent **session management** restoring full context across restarts.
- Ran agents on AWS Bedrock models and Ollama models with structured debug logging across the multi-agent graph for traceability, and structured for S3-backed session storage.

Pubo — Build-in-Public Platform **GitHub**
Go, React Native (Expo), PostgreSQL, Redis, Asynq, Echo, Clerk, Azure Blob Storage, Docker

- Built a cross-platform mobile app (Go + React Native/Expo) enabling creators to compose and cross-post content to **Bluesky and LinkedIn**, on a layered **Handler** → **Service** → **Repository** backend spanning 20+ Go packages under an idiomatic `cmd/` + `internal/` layout.
- Engineered a 4-stage Echo middleware pipeline (CORS, token-bucket rate limiting at 100 req/min, UUID request-ID tracing, context enrichment), cutting production debug time by ∼70% via correlated logs.
- Integrated Clerk JWT authentication with stateless middleware-level validation, eliminating per-request database round-trips, and built an **Azure Blob Storage** media pipeline for scalable image delivery across iOS/Android with SIGTERM-safe graceful shutdown.

SkillSocket — Skill-Exchange Platform **GitHub**
Flutter, Node.js/Express, MongoDB, Cloudinary, Docker, Render, GitHub Actions

- Shipped a full-stack skill-exchange platform (Flutter, Node.js/Express, MongoDB) featuring a **Tinder-style swipe matching engine** and community rooms, delivered across 3 sprints with a 4-member team.
- Designed a modular Express backend (JWT auth, bcrypt hashing, role-based middleware, Mongoose schemas, 9+ REST endpoints) and integrated Gemini 1.5 Flash behind a **circuit breaker** with cached fallbacks, keeping chat available during upstream outages.
- Built a Cloudinary media pipeline with client-side compression, cutting payload size by ∼60%, and automated CI/CD with GitHub Actions, deploying via Docker to Render to cut release time from ∼20 min to ∼3 min across 25+ deploys.

Achievements

- **IIT Hyderabad Hackathon — Top 7 Finalist:** advanced through ideathon and 24-hour build rounds among 30+ teams.
- **Data Structures & Algorithms:** solved 400+ problems on LeetCode in Java.
- **Building in Public on X:** regularly documents engineering builds and technical learnings for a public audience.
